PREAMBLE	1
1. FOREWORD	2
2. GUIDE TO THE SYLLABUS	3-4
3. SYLLABUS	5-68
 Topic Area I Differential Equations	
Unit 1 First Order Differential Equations and its Applications	5-10
1.1 Basic Concepts and Ideas	
1.2 Formation of Differential Equations	
1.3 Solution of Equations with Variables Separable	
1.4 Solution of Linear Differential Equations	
1.5 Solution of Equations Reducible to Variables Separable Type or Linear Type	
 Unit 2 Second Order Differential Equations and its Applications	 11-18
2.1 Classification of Types	
2.2 Principle of Superposition	
2.3 Solution of Homogeneous Equations with Constant Coefficients	
2.4 Solution of Non-homogeneous Equations with Constant Coefficients	
(a) Complementary function and particular integral	
(b) Method of undetermined coefficients	
2.5 Reduction of Equations to Second Order Differential Equations with Constant Coefficients	
2.6 Systems of two First Order Differential Equations	
2.7 Applications in Practical Problems	
 Topic Area II Numerical Methods	
Unit 3 Interpolation and Lagrange Interpolating Polynomial	19-22
3.1 Interpolation and Interpolating Polynomials	
3.2 Construction of Lagrange Interpolating Polynomials	
3.3 Use of Lagrange Interpolating Polynomial	
3.4 Error Estimation of Interpolating Polynomial	

	Page
Unit 4 Approximation	23-27
4.1 Treatment of Errors, their Estimation and Algebraic Manipulation	
(a) Three basic types of errors	
(i) Inherent error	
(ii) Truncation error	
(iii) Round-off error	
(b) Absolute and relative error	
(c) Estimation of errors	
(d) Combining errors	
4.2 Approximation of Functional Values using Taylor's Expansion	
(a) Taylor's series expansion of a function	
(b) Error estimation	
 Unit 5 Numerical Integration	 28-32
5.1 Numerical Integration	
5.2 Trapezoidal Rule	
(a) Derivation of the trapezoidal rule	
(b) Estimation of the error	
(c) Application of trapezoidal rule	
5.3 Simpson's Rule	
(a) Derivation of Simpson's rule	
(b) Estimation of the error	
(c) Application of Simpson's rule	
 Unit 6 Numerical Solution of Equations	 33-39
6.1 Method of Fixed-point Iteration	
(a) Algorithm of the method	
(b) The condition of convergence	
(c) Estimation of error	
6.2 Newton's Method	
(a) Algorithm of the method	
(b) The condition of convergence and error estimation	
(c) Application of Newton's method	
6.3 Secant Method	
(a) Derivation of the secant method	
(b) Application of the secant method	
6.4 Method of False Position	
(a) Derivation of the method of false position	
(b) Application of the method of false position	

	Page
Topic Area III Probability and Statistics	
Unit 7 Introductory Probability Theory	40-45
7.1 Basic Definitions	
7.2 Ways of Counting	
7.3 Probability Laws	
7.4 Bayes' Theorem	
7.5 Recurrence Relation	
Unit 8 Basic Statistical Measures	46-47
8.1 Basic Knowledge	
8.2 Calculation of Mean	
8.3 Calculation of Standard Deviation and Variance	
Unit 9 Random Variables, Discrete and Continuous Probability Distributions	48-61
9.1 Random Variable	
(a) Discrete probability function	
(b) Probability density function	
9.2 Expectations and Variances	
9.3 Binomial Distribution	
(a) Bernoulli trials, Binomial probability	
(b) Binomial distribution	
(c) Applications	
9.4 Normal Distribution	
(a) Basic definitions	
(b) Standard normal curve and the use of normal table	
(c) Applications	
(d) Binomial approximated to normal distribution	
9.5 Linear Combination of Independent Normal Variables	
Unit 10 Statistical Inference	62-68
10.1 Basic Concept	
10.2 Estimation of a Population Mean from a Random Sample	
10.3 Confidence Interval for the Mean of a Normal Population with Known Variance	
10.4 Hypothesis Testing	
10.5 Type I and Type II Errors	
APPENDIX: MATHEMATICS REFERENCE BOOKS	69-72
Membership of Curriculum Development Council Applied Mathematics Subject Committee (Sixth Form)	73-74
