PREAMBLE	7
1. FOREWORD	8
2. A GUIDE TO THE SYLLABUS	9 – 11
3. SYLLABUS WITH OBJECTIVES AND NOTES ON TEACHING	12 – 39
<b>Unit 1      Permutations and Combinations</b>	<b>12</b>
1.1 The fundamental Principle of Multiplication	
1.2 Definitions of permutations and combinations – and their distinction	
1.3 The symbols $n!$ , $P_r^n$ and $C_r^n$	
1.4 Simple applications of permutations and combinations to problems	
<b>Unit 2      The Binomial Expansion</b>	<b>13 – 14</b>
2.1 The expansion $(1+x)^n$ when $n$ is a positive integer	
2.2 The expansion of $(1+x)^n$ when $n$ is not a positive integer and $ x  < 1$	
<b>Unit 3      The Exponential Function</b>	<b>15 – 16</b>
3.1 Properties and graphs of exponential functions	
3.2 Solution of simple equations with known indices	
3.3 The exponential series	
<b>Unit 4      The Logarithmic Function</b>	<b>17 – 18</b>

	<i>Page</i>		<i>Page</i>
4.1		Properties and graphs of the logarithmic function	
4.2		Solution of simple equations involving logarithms	
4.3		Reduction of the relation $y = kx^n$ to a linear relation	
<b>Unit 5</b>		<b>Limit and Derivative</b>	
	19		
5.1		Limit of a function	
5.2		Derivative of a function	
<b>Unit 6</b>		<b>Differentiation</b>	
	20 – 21		
6.1		Basic differentiation rules	
6.2		Differentiation of composite functions and inverse functions	
6.3		Differentiation of $e^x$ and $\ln x$	
6.4		Second derivative	
<b>Unit 7</b>		<b>Applications of Differentiation</b>	
	22 – 23		
7.1		Gradient	
7.2		Rate of change	
7.3		Maxima and Minima	
7.4		Approximation	
7.5		Simple curve-sketching	
<b>Unit 8</b>		<b>Indefinite Integration</b>	
	24		
8.1		Indefinite integration	
8.2		Some formulae for indefinite integration	
8.3		Integration by substitution	
<b>Unit 9</b>		<b>Definite Integration</b>	
	25 – 26		
9.1		Definite integral	
		9.2	Properties of definite integral
		9.3	Plane areas
		9.4	Approximation of definite integrals using the trapezoidal rule
		<b>Unit 10</b>	<b>Basic Statistical Measures and their Interpretation</b>
			27
		10.1	Measures of central tendency
		10.2	Measures of dispersion
		10.3	Frequency distribution, cumulative frequency distribution and their graphical representations including stem-and-leaf diagrams and their interpretations
		<b>Unit 11</b>	<b>Sample Space, Event and Probability of an Event</b>
			28 – 29
		11.1	Set notation
		11.2	Sample space, event and probability
		11.3	Mutually exclusive, exhaustive and complementary events
		11.4	Further examples
		<b>Unit 12</b>	<b>More about Probability</b>
			30 – 31
		12.1	The addition rule
		12.2	Conditional probabilities
		12.3	Bayes' Theorem
		<b>Unit 13</b>	<b>Bernoulli, Binomial, Geometric and Poisson Distributions and their Applications</b>
			32 – 33
		13.1	Random variable, probability function, and discrete probability distribution
		13.2	Bernoulli distribution

	<i>Page</i>
13.3 Binomial distribution	
13.4 Geometric distribution	
13.5 Poisson distribution	
13.6 Means and variances	
13.7 Applications of Bernoulli, binomial, geometric and Poisson distributions	
<b>Unit 14 The Normal Distribution and its Applications</b>	<b>34 – 37</b>
14.1 Normal distribution	
14.2 Normal curve and standard normal curve	
14.3 Normal table	
14.4 Applications of normal distribution	
<b>Unit 15 Population Parameters and Sample Statistics</b>	<b>38</b>
15.1 Basic terminology	
15.2 Sample mean distribution	
15.3 Parameters estimation	
<b>Unit 16 Comparison of Frequency Distributions with Fitted Probability Distribution</b>	<b>39</b>
16.1 Ideas of goodness-of-fit of an assumed probability distribution to a set of observed data	
16.2 Comparison with fitted distribution
