Learning Objectives

This part allows students to investigate a wide range of issues in PE, sport and recreation in relation to society. It helps students gain a deeper understanding of the roles and values of PE and sport (Part I) from a socio-cultural perspective. It also nurtures students' higher-order thinking skills by engaging them in debating current issues, critical analysis of incidents, role-play, etc. Knowledge gained in previous parts will provide useful information and findings for discussing the issues identified in this part.

Expected learning outcomes: Students will be able to

1. explain the relationship between Olympism and healthy living with appropriate examples;
2. evaluate the impact of major international sports organisations and events on society from different perspectives;
3. compare the sports cultures in Mainland China with those of Hong Kong, and highlight their differences and similarities; and
4. discuss the factors affecting Hong Kong people's interest and habits of participation in sports and exercise; and make recommendations on how to promote community sports.

Glossary

Term	Description
1. Amateur 業餘運動員	An individual who competes in sport on the basis that he/she will not receive any monetary reward for his/her involvement. This term originated from the ideal of putting fair play and team spirit high above any material objectives.
2. Baron Pierre de Coubertin 皮埃爾·德·顧拜旦	A French educator who was the advocate and founder of the modern Olympic Games. He was honoured as the father of the modern Olympic Games.
3. Communication media (the media) 傳播媒體 (傳媒)	A variety of communication tools such as movies, television, radio, books, magazines, newspapers, etc.
4. Culture 文化	Commonly refers to a) sport and physical activities, fine arts, the humanities, etc. b) the beliefs, behaviour, thought, attitudes, values, goals and practices that characterise an institution or a group.
5. Elite 精英	A minority group of people with outstanding personal abilities, intellect, wealth, specialised training / experience or other distinctive attributes.
6. International Olympic Committee (IOC) 國際奧林匹克委員會 (國際奧委會)	An international, non-governmental and non-profit making organisation, of unlimited duration, in the form of an association with the status of a legal person, recognised by the Swiss Federal Council. Its headquarters is in Lausanne (Switzerland); its object is to fulfil the mission, role and responsibilities assigned to it by the Olympic Charter.

Term	Description
7. IOC members 國際奧委會成員	The IOC comprises the following four types of persons: a) Active athletes (number not exceeding 15); b) Persons holding senior leadership positions in International Federations (IFs), associations of IFs or other organisations recognised by the IOC (number not exceeding 15); c) Persons holding senior leadership positions on National Olympic Committees (NOCs), or world or continental associations of NOCs (number not exceeding 15); and d) Independent individuals (number not exceeding 70).
8. Olympic Charter 《奧林匹克憲章》	It is the codification of the fundamental principles of Olympism, and the rules and bye-Laws adopted by the IOC. It governs the organisation, actions and operation of the Olympic Movement and sets out the conditions for the celebration of the Olympic Games.
9. Olympic Movement 奧林匹克運動	The concerted, organised, universal and permanent action, carried out under the supreme authority of the IOC, of all individuals and entities who are inspired by the values of Olympism. It covers the five continents. It reaches its peak with the bringing together of the world's athletes at the great sports festival - the Olympic Games. Its symbol is the five interlaced rings.
10. Olympism 奧林匹克主義	According to the Olympic Charter, it is a philosophy of life exalting and combining in a balanced whole the qualities of body, will and mind. Blending sport with culture and education, Olympism seeks to create a way of life based on the joy of effort, the educational value of good example and respect for universal fundamental ethical principles.

	Term	Description
11.	Philosophy 哲學	A discipline exploring how to live (ethics), what exist and their nature (metaphysics), what is true knowledge (epistemology), and what are the correct principles of reasoning (logic).
12.	Politics 政治	The process by which groups of people make decisions. It is prevalent in the international political arena and in government, business, academic, religious and other institutions at different levels.
13.	Racial discrimination 種族歧視	Differences in treatment of people on the basis of characteristics which may be classified as racial discrimination, including skin colour, cultural heritage and religion.
14.	Society 社會	A group of humans or other organisms of a single species that is delineated by the bounds of cultural identity, social solidarity, functional interdependence, etc.
15.	Socio-economic status 社會經濟地位	It is the "standing", the honour or prestige attached to one's position in society. Social status is influenced by the social position. One can have several social positions, but only one social status.
16.	Solidarity 團結	Unity or agreement of feeling or action, especially among individuals with a common interest.
17.	Sport for all 普及運動	A movement promoting the Olympic ideal that sport is a human right for all individuals regardless of race, social class or gender.

Essential Concepts and Theories

A. Olympic Movement and Olympism

i) Philosophical foundations, history and development of the Olympic Games

Ancient Greece was composed of different city states. Years of fighting among cities were common because of conflicts of interests. However, during the Olympic Games the whole of Greece was under a “sacred truce”, allowing all the Greek athletes and people to be free from the threat of war and to enjoy the athletic contests peacefully and joyfully. The concept “harmony through sport to promote human development” advocated in Olympism long existed in the ancient Olympic Games; and the practice of a “sacred truce” had a far-reaching impact on the modern Olympic Games.

At the end of the 19th Century, Pierre de Coubertin, a French aristocrat who was fond of sports and very approving of the ancient Olympic Games, promoted the idea of enhancing the quality of education through sports and providing an opportunity for the youth of different nations to meet in a game that promoted mutual understanding, friendship and world peace. He travelled around Europe and the United States to lobby for this and finally, against all odds, set up the International Olympic Committee (IOC) in 1894. The first modern Olympic Games took place in 1896 in Athens. Subsequent Olympic Games have been held every four years. Three Olympic Games (1916, 1940 and 1944) were delayed for four years because of wars. The Olympic Games transcend barriers of politics, religion, colour, race and language. Olympism promotes peace and harmonious development.

ii) Olympic Movement and Olympism

Olympic Movement – According to the “Olympic Charter”, Olympic movement is the concerted, organised, universal and permanent action, carried out under the supreme authority of the IOC, of all individuals and entities who are inspired by the values of Olympism. It covers the five continents. It reaches its peak with the bringing together of the world’s athletes at the great sports festival, the Olympic Games.

Olympism – The term Olympism was first used by Pierre de Coubertin but he never provided a clear definition of it and people interpreted the term in different ways. In 1974, the International Olympic Committee proposed giving a clear definition for the term in the “Olympic Charter”.

After more than 10 years' discussion, the following first official definition of Olympism was included in the "Olympic Charter" with effect from 16 June 1991:

Olympism is a philosophy of life, exalting and combining in a balanced whole the qualities of body, will and mind. Blending sport with culture and education, Olympism seeks to create a way of life based on the joy of effort, the educational value of good example and respect for universal fundamental ethical principles.

(IOC, 2014, pg 16)¹

The Olympic symbol – the five rings – The Olympic symbol consists of five interlaced rings. It was designed by Pierre de Coubertin, the father of the modern Olympic Games. The colours of the five interlaced rings, from left to right, are blue, yellow, black, green and red. The symbol represents the union of the five continents and the meeting of athletes from throughout the world at the Olympic Games.

The Olympic motto “Citius–Altius–Fortius” – The motto was proposed by a friend of Pierre de Coubertin, Henry Martin Didon, who set up a sports school in Paris in 1891 and used the motto to encourage his students at a games day in 1895. Pierre de Coubertin liked this very much and kept the motto in mind for the Olympic Games. In 1920, the International Olympic Committee adopted “Citius-Altius-Fortius” (“Faster-Higher-Stronger”) as the Olympic motto. The motto fully expresses the athletes’ spirit of commitment, continuous improvement and striving for excellence in competitions and training.

The Olympic flame and torches - The Olympic flame is “a manifestation of the positive values that Man has always associated with the symbolism of fire.”². The Torch Relay helps “herald the Olympic Games and transmit a message of peace and friendship to people along the way”².

The Olympic oaths - In 1920's Olympic Games, the swearing-in ceremony for the athletes was introduced. The oath (athletes) reads: "In the name of all the competitors, I promise that we shall take part in these Olympic Games, respecting and abiding by the rules that govern them, in the true spirit of sportsmanship, for the glory of sport and the honour of our teams".

The Olympic anthem – In 1896, at the opening ceremony of the first Athens Olympic Games, King George I of Greece announced the opening of the Olympic Games and a choir sang the “Olympic Anthem”, but the song was not designated as the song for the Olympic Games at that time. Subsequently there was no regular song for the Games, and the host country made the decision each time. In the 1950s, it was suggested that a new Olympic song

¹ International Olympic Committee. (2014). Olympic Charter. Lausanne: DidWeDo S.à.r.l

² International Olympic Committee. (2013). The Olympic Flame and Torch Relay. Lausanne: The Olympic Museum.

be composed for permanent use, but no satisfactory song was produced. Then, the International Olympic Committee meeting in Tokyo in 1958 confirmed that the “Olympic Anthem” would be used. Its score is stored in the International Olympic Committee headquarters.

Other features in Olympic Games

a. The Olympic emblems - The emblems of the Olympic Games not only embody the Olympic spirit but also reflect the characteristics of the host countries as well as the host cities. For example, the Beijing 2008 Olympic Games emblem, “Chinese Seal, Dancing Beijing”, is filled with Beijing's hospitality and hopes and conveys the city's commitment to the world.

b. The Olympic mascots - Although there are no specific provisions for them, Olympic mascots are the most influential hallmarks of each Olympic Games.

c. The Olympic Cultural Festival – The idea of holding a culture and art festival within the Olympic Games celebration is embedded in the very foundations of the Olympic Movement. Nowadays, cultural and art events taking the form of exhibitions and festivals have become an integral part of every Olympic Games.

iii) China's involvement in the Olympic Movement

China's involvement in the Olympic Movement has reflected the nation's rise and fall in the different periods. In the early years, under the nation's policies of self-isolation and ignoring sports, China distanced herself from the Olympic Movement. Starting from the beginning of the 1980s, under the “reform and opening up” policy, China has become a new force in the world's political and economic arenas. Great advances in the development of sport have also been seen.

Dates	Important Events
1894	Qing Government declined an invitation from the Greek prince and Pierre de Coubertin to send athletes to the first Modern Olympiad due to unfamiliarity with sports events.
1910	First Chinese national sports meet was held as part of an effort to participate in and host the Olympic Games.
1913 - 1934	The Far Eastern Championship Games (originally called the Far East Olympics) were held and as one of the founders, China participated in all 10 Games held during this period.
1915	The IOC recognised the Far Eastern Championship Games and invited China to join the next Olympics and attend IOC meetings.
1922	Wang Zhengyan was elected as the first Chinese IOC member.
1931	IOC formally recognised the All-China Athletic Association.
1932	A six-member delegation was sent to the tenth Olympics in Los Angeles. Sprinter Liu Changchun became China's first Olympic athlete.
1936	A delegation with 69 Chinese competitors and some demonstrators of traditional martial arts was sent to the Berlin Games.
1950	The Amateur Athletic Federation of Hong Kong (AAFHK) was established. In 1951, The AAFHK was renamed as "The Amateur Sports Federation & Olympic Committee of Hong Kong", which became recognised as a member of the IOC. Hong Kong has competed in every Games since 1952.
1952	Some Chinese Olympic committee members went to Taiwan with the overthrown Kuomintang Government following the establishment of the People's Republic of China (PRC). These committee members claimed that they should represent China at the Olympics. The IOC invited only athletes from the PRC.
1955	The Chinese Olympic Committee (COC) claimed that the Taiwan sports organisation was illegal and that they should not be recognised by the IOC.
1956	Taiwan was invited to participate independently. The COC lodged a protest and withdrew from the Melbourne Games.
1958	The COC suspended all relations with the IOC.
1960	Yang Chuanguang, representing Taiwan, became the first Chinese medallist taking a silver medal in the decathlon at the Rome Olympics in 1960.
1968	Ji Zheng became the first female Chinese medallist, taking a bronze medal in the 80m hurdles in Mexico.

Dates	Important Events
1970	Taiwan Olympic Committee was recognised as a National Olympic committee. Up to this point, Taiwan participated in five Summer Games.
1979	The COC successfully applied to the IOC for reinstatement. The Olympic Committee of the Taiwan region could only use the name “Chinese Taipei”.
1980	China took part in its first Winter Games at Lake Placid. China withdrew from the Summer Games in Moscow in protest against the invasion of Afghanistan by the former Soviet Union.
1982	Chinese Taipei Olympic Committee became a member of the Asian Olympic Council.
1984	Shooter Xu Haifeng became China’s first gold medallist at the Los Angeles Games. Altogether, China took 15 gold, 8 silver and 9 bronze medals, finishing fourth in the gold medals tally. Chinese Taipei won 2 bronze medals. It was the first time that both China and Chinese Taipei attended the Games since 1948.
1992 – 2000	China sent large delegations to all Summer Games and always finished in the top four in the medal table. Windsurfer Lee Lai-shan won Hong Kong’s first gold medal at Atlanta in 1996. In 2000, Yu Zaiqing became the seventh Chinese in history to be elected as an IOC member.
1999	The Amateur Sports Federation & Olympic Committee of Hong Kong (ASF&OC) was formally renamed as Sports Federation & Olympic Committee of Hong Kong, China (SF&OC). It is a member of the IOC.
2001	Beijing beat off competition from nine other cities to win the right to host the 29th Summer Games in 2008.
2002	Short-track speed skater Yang Yang won two gold medals at the Winter Games in Salt Lake City. It was China’s first gold medal at Winter Games.
2004	China finished second in the medal table at the Athens Games. Chinese Taipei won two gold medals. Mr. Li Ching and Mr. Ko Lai-chak of Hong Kong won a silver medal in the men’s table-tennis doubles.
2008	China hosted her first Olympic Games, topped the table with 51 gold medals.
2012	China got 38 gold medals at the 2012 Olympics in London, United Kingdom and ranked 2 nd in the medal table with 88 medals in total. Hong Kong cyclists, Ms. LEE Wai Sze won a bronze medal in Track Cycling (Women’s Keirin).
2016	China got 26 gold medals at the 2016 Olympics in Rio, Brazil , China got one medal less than England and ranked 3 rd in the medal table.

Dates	Important Events
2020 (Postponed to 2021 due to the COVID-19 pandemic)	China got 38 gold medals at the 2020 Olympics in Tokyo, Japan, China got one gold medal less than USA and ranked 2nd in the medal table. The Hong Kong, China Delegation won the exceptional achievements in winning six medals including one Gold, two Silvers and three Bronzes. Mr. CHEUNG Ka-long won the gold medalist of Fencing Men's Foil Individual event, Ms. Siobhan Bernadette HAUGHEY won silver medals of the Swimming Women's 200m and 100m Freestyle events, Ms. DOO Hoi-kem, Ms. SOO Wai-yam and Ms. LEE Ho-ching won the bronze medal in the Table Tennis Women's Team event, Ms. LAU Mo-sheung won the bronze medal in Karate Women's Kata event and Ms. LEE Wai-sze won a bronze medal in Track Cycling Women's Sprint event.

Table 8.1 History of the China's involvement in the Olympic Movement

iv) Challenges to the Olympic Movement and Olympism

Political interference - The foremost challenge to the independence of the Olympic Movement comes from political interference. For example, in the 1970s and 1980s the Olympic Games faced large-scale political boycotts, rooted in the conflict between East and West as well as the conflict among countries in Southern Africa over racism.

Conflict among the three pillars - The International Olympic Committee, International Sports Federations and National Olympic committees together make up the cornerstone of the Olympic Movement. Their concerted collaboration is of paramount importance. At present, the relationships among these three pillars are on the whole good. However, there are some potential problems, mainly concerning the distribution of power and economic interests. For example, the International Olympic Committee considers the selection of the host city for the Olympic Games to be its exclusive right, but the International Sports Federations and National Olympic committees want to change the status quo and be involved in the voting process.

Commercialisation - Commercialisation enables the Olympic Movement to overcome economic difficulties but also affects the normal operation of the Olympic Movement. For example, at the Seoul Olympic Games, many events that should have taken place in the afternoon or evening were shifted to the morning sessions at the request of the American

Broadcasting Company to match with the TV prime time in the eastern regions of the United States. This arrangement obviously affected the performance of the athletes.

Professionalism - Amateur status was once a basic principle of the Olympic Movement and regarded as one of its vital elements. However, athletes must devote much effort and time to training to achieve a high level of performance, and the cost of long-term training can come only from national or corporate sponsorships. Apart from this, demanding amateur status would mean the exclusion of many good athletes from the Olympic Games. This would not be conducive to the enhancement of performance and would hinder the development of the Olympic Movement. Afterwards, the International Olympic Charter abolished the “amateur” requirement. However, professionalism may prompt athletes to care more about financial benefits and limit the participation of non-professionals. This topic is worthy of careful consideration.

Challenges of Anti-doping - Using drugs to enhance performance makes a mockery of the Olympic motto of “**Citius–Altius–Fortius**”. Doping is now firmly banned by the International Olympic Committee and the punishment for violations is increasing. For example, there was an investigation into allegations against the Government of Russia at the 2014 Winter Olympics in Sochi. Despite repeated denials by Russian, the report has found evidence of “the systemic manipulation of the anti-doping rules and system” which has backed up previous allegations of government involvement in cheating. As a result, Russia has been banned from competing at Winter Olympics 2018 in Pyeongchang by the International Olympic Committee. Individual Russian athletes could still compete if they could pass a screening process and demonstrate that they hadn’t violated doping rules. And any who did pass the screening process would be allowed to compete as neutral “Olympic Athletes from Russia.” However, as doping methods become more and more subtle, detection is a very challenging task.

Ultra-large scale - Prior to World War II, fewer than 50 countries and regions took part in the Olympic Games. The number of athletes and countries increased rapidly after the War. For the 2004 Athens Olympic Games, the number of participating countries and regions was 202. Taking into account the coaches, referees, journalists, security personnel and service personnel, a total of more than 70,000 participants, along with hundreds of thousands or even millions of tourists gathered in the host city. Such a size is bound to impose a heavy burden on the host city and makes many countries and regions hesitant about bidding to host the Olympic Games.

B. International organisations, major games and major international competitions

i) International Olympic Committee, International Sports Federations and National Olympic Committees

The International Olympic Committee, International Sports Federations and National Olympic committees together make up the cornerstone of the Olympic Movement.

International Olympic Committee (IOC) serves as an umbrella organisation of the Olympic Movement and oversees the running and organisation of all Olympic Games. Its headquarters is in Lausanne (Switzerland). The IOC comprises the following four types of persons (number not exceeding 115 in total): a) active athletes; b) persons holding senior leadership positions in international federations (IFs), associations of IFs or other organisations recognised by the IOC; c) persons holding senior leadership positions on National Olympic Committees (NOCs), or world or continental associations of NOCs; and d) independent individuals.

An international sports federation (IF) is the world governing body for a particular sport. Examples of IFs include Fédération Internationale de Football Association (FIFA), and Fédération Internationale de Natation (FINA) (International Swimming Federation). All these organisations establish participation and eligibility rules; set schedules for events; liaise with sponsors and the media; and select referees, judges and other officials to run their respective international competitions.

National Olympic committees are responsible for the local development of Olympic movement at their places. For example, the Sports Federation and Olympic Committee of Hong Kong, China, promotes the interests of sports in Hong Kong and select and send Hong Kong, China delegations to all multi-sports Games, including the Olympic Games, Asian Games, and East Asian Youth Games, etc.

Olympic Games and other major games / international competitions

- **Olympic Games** - The Olympic Games are international multi-sport events comprising the Summer Games and Winter Games. The Summer Games and Winter Games are each held every four years. In 1992, they were held in the same year. Since then, they have been staged two years apart. Fewer countries compete in the Winter Games due to weather restrictions. For example, in the Beijing 2008 Olympic Games, 204 countries or regions competed in 302 events in 28 sports; in the 2010 Winter Olympics, only 82 countries competed in 86 events of 7 sports.

-
- **Paralympic Games** - The Paralympic Games are held for athletes with **an impairment** by the International Paralympic Committee (IPC). The IPC organises the summer and winter sporting events. The first Games were held in 1960. The Games have always been held in the same year as the Olympic Games. The Games have taken place in the same venues as the Olympic Games in the 1988 Seoul Summer Games and the 1992 Albertville Winter Games. In 2001, the practice of “one bid, one city” has been confirmed so the staging of the Paralympics is automatically included in the bid for the Olympic Games.
 - **The Youth Olympic Games (YOG)** - The first summer YOG was held in Singapore in August 2010 while the first winter YOG was held in Innsbruck, Austria from in January 2012. The age limitation of the athletes is 14 to 18, the purposes of YOG including to inspire young people around the world to participate in sport and encourage them to adopt and live by the Olympic values and become ambassadors of Olympism.
 - **Asian Games** - The Asian Games were firstly held in New Delhi in 1951. This event is currently run by the Olympic Council of Asia (OCA) and is held every four years.
 - **East Asian Games** - The East Asian Games Association Council is responsible for selecting countries to host the event. The historical first-ever East Asian Games took place in Shanghai, China in May 1993. Since then, the East Asian Games have been held every four years to promote sport and cultivate friendship in the East Asia region. After the last East Asian Games took place in Tianjin, China in October 2013, the East Asian Games Association decided to change the event into a youth competition, East Asian Youth Games, in 2019 to enable more young athletes to take part in regional games.
 - **Commonwealth Games** - The Commonwealth Games are organised by the Commonwealth Games Federation and were held for the first time in 1930 in Canada. Hong Kong sent a team to the Commonwealth Games for the first time in 1954 and sent its last team to the Games in Victoria, Canada in 1994.
 - **International events** - The International Federations also regularly organise large scale international events, such as World cups and World Championships.

ii) The benefits of organising major international competitions

Organising major international competitions may have political, economic and cultural benefits.

Examples of political benefits:

- The host countries can demonstrate their strengths, arouse international attention and recognition through organising major international competitions.
- With diplomatic strategies, they can promote political propaganda and foster cooperation.
- They can arouse the national identity and strengthen the sense of belonging and cohesion of their people.
- They can distract the focus in the countries from dissatisfaction on economic, social and political items to major international competitions.

Examples of economic benefits:

- The host countries can attract a large number of visitors and consumers so that several sectors such as tourism industries, advertising and marketing companies, hotels and restaurants will benefit.
- They can create opportunities to expedite the city infrastructure, like improving transportation, communication and environmental hygiene.
- They can create “brand image” for the host cities to attract foreign expertise and capital.

Examples of cultural benefits:

- The host countries can promote active and healthy lifestyles by improving sports facilities and facilitating more citizens to participate in physical activities.
- They can construct many new sports facilities for major sports competitions and some of these will become the landmarks of their cities.
- They can introduce their cultural heritage to the world through the mass media.
- They can develop elite sports and promote sports in the community and across different countries.

C. China's sporting culture

i) China's sporting culture

The General Administration of Sport of China (GASC) - The organisation of sport in China stems from the Central People's Government. Working directly under the State Council of the Government, the GASC manages the sport affairs for the whole country. GASC works in tandem with the All-China Sports Federation to ensure that the needs for sport and recreation of the population are met. The Chinese Olympic Committee (COC) also works with these two organisations and performs similar duties in China, as comparable to the SF&OC in Hong Kong.

- **National Fitness Program** - In June 1995, the government announced "An Outline of the National Fitness Programme of China" and set targets for nationwide health promotion and developed a sport system with Chinese characteristics. In October of the same year, the Sports Law was implemented providing guidelines to direct the development of community sport, school sport, competitive sport, etc. of the nation. In 2016, the government further announced "The National Fitness Program" for 2016-2020. It is believed that sports should be integrated with different industry, such as education, medical culture and tourism. Up to 2020, the target of the programme is to have 700 million people to take part in physical exercises at least once a week, among them 435 million as regular exercisers. Besides, the total consumption of sports is expected to reach 1,500 billion RMB in 2020. **In August 2021, National Fitness Plan (2021-2025) is announced and it is expected that about 38.5% of Chinese will exercise frequently. There will be 2.16 social sports instructors for each thousand people and the total consumption of sports is expected to reach 5 trillion in 2025.**
- **Care for the elite athletes** - There is a policy of nurturing elite athletes in China. These athletes receive allowances and support in training, studies and living so that they can focus on striving for excellence in sport. They receive awards for themselves, their coaches and their training units in the event of good performance. Their livelihood matters after retirement are also well taken care of.
- **Traditional sports** - Traditional sports also form a very important part of China's sporting culture. Many of the traditional sports activities are not only beneficial for health, but also have high artistic value, as well as rich recreational and educational functions. Such sports activities include Mongolian wrestling, Tibetan yak racing, Manchu skating, etc.
- **International sports** - The emergence of China as a nation with a powerful and thriving economy in the latter part of the 20th Century has paved the way for international sports

such as basketball, football and baseball to gain footholds in the mainland. Sports franchises and multinational clothing companies began to investigate means of tapping into the new international sporting culture that was evolving amongst many of the younger Chinese generation. The success of Chinese athletes such as Yao Ming (basketball) and Liu Xiang (athletics) in international sports has resulted in increased interest and participation in those sports. Furthermore, the hosting of major international sports events like Olympics, East Asian Games, Tennis Masters, etc. has deepened the understanding of the general public about the important role of China in the global sports community.

ii) The National Games of the People's Republic of China

The National Games of the People's Republic of China (The All-China Games) is the premier sports event in China at the national level. The All-China Games is organised by the General Administration of Sport of China. The Games also serves as an ideal opportunity for national coaches to identify athletic talents and build up national teams for the Olympic Games and world championship events. They have gone from being held at 10-year intervals to 5-year intervals and currently take place every four years. With the huge interest in sports generated by the hosting of the Olympics in 2008, the All-China Games is expected to continue to grow in popularity in the years ahead.

- The 13th National Games of China (13th National Games) is being held in Tianjin City in 2017. It was the first time that the medal standing was cancelled and the teams did not need to compete with the number of medals awarded. The athletes could further enjoy the process of competitions rather than focusing only on the competitions results. A new entry category was introduced in the 13th National Games to allow cross-team participation in the competitive sports events with teams consisting of four or less members. Top Chinese athletes from around the world and overseas Chinese athletes were also being invited to participate in the events. To keep with the theme of "National Games for a Healthy China", in addition to the existing competitive sports events organised for athletes, events for the general public were also introduced to promote participation of the public and organisations in sports on a voluntary basis.

D. Sport and society

Nowadays, sport and society have a very close relationship. The followings are some topics worth exploring:

i) “Sport for all” and “Developing elite athletes”

- “Sport for all” aims to:
 - (1) promote a healthy lifestyle among citizens;
 - (2) foster a sporting culture in the community;
 - (3) enhance citizens’ sports participation and their quality of life; and
 - (4) reduce the pressure on Hong Kong's public health care system

- “Developing elites athletes” aims to:
 - (1) enhance the international status of a country or district through winning in the international sporting arena;
 - (2) demonstrate its strengths in sports and scientific development;
 - (3) give opportunities to the talented to excel in specific sports;
 - (4) nurture sports identity in citizens and strengthen their national identity; and
 - (5) create role models for youngsters to pursue excellence.

“Sport for all” and “Developing elite athletes” are mutually complementary. If sport for all is prevalent, more participants will play various sports, and thus providing a broad base for sports development. Then more talented players will be identified for elite training. If they win medals or show outstanding performance in major competitions such as the Olympic Games, the Asian Games and World Championships, more young people will believe in the spirit “Yes, I can” and will be consequently inspired to excel in sport. Therefore, these two sports promotion strategies are mutually beneficial to each other, and should not be considered as rivals.

ii) Amateurs and professionals

- The definitions of “Amateurs” and “Professionals”

The criterion used previously to differentiate between amateurs and professionals in sport is that amateur athletes make no money for their athletic performance or in connection with their status.

The Ancient Olympic Games allowed all Greek citizens except women to participate and compete in the Games. There was no differentiation between amateurs and professionals in sports contests. Professional athletes emerged later due to the considerable rewards and status gained from winning. The revival of modern Olympic created a new rule to protect the wealthy aristocrats and favour the athletes from wealthy families, and exclude those athletes who earn their living by their sports skills. Therefore, the amateurism in sport development was in dispute.

- Fairness in sport

“Fairness in sport” can be interpreted as “playing within certain rules which are based on the principle of justice” and “games are fair if the rules do not discriminate against any of the participants while giving each the same role and the same opportunities. Games are fair if the positions of the players are interchangeable from the very beginning”.

Taking fairness in sport into consideration, the argument has been shifted to how costly it is to nurture an elite athlete at international level. This is also a form of unfairness due to the unbalanced development between developing and developed countries.

- Conflict between “Amateurs” and “Professionals” athletes in Olympics

In ancient Olympics, there is no differentiation between the two, so no comparison can be made. In '80s of the last century, the performance between the two became huge, for instance, the levels between the NBA Basketball or ATP Tennis and amateur competitions are not comparable.

Due to the grey area within this definition, the eastern bloc communist countries employed the armies to cover up the professional status of their athletes in Olympic Games.

Obviously, the IOC could not come up with a proper solution to tackle this issue. In the 1992 Barcelona Olympic Games, the long-time controversial ‘amateur’ and ‘professional’ issue in sport is terminated in 1992 by allowing all professional athletes to compete in Olympics except boxing and wrestling events.

Nowadays, the advancement of sport science gives tremendous support to sports training, recovery and competition preparation and further investment in various aspects, making a great difference to the performance between amateurs and professionals.

iii) Competitions

- Functions of a sport competition may include:

It is believed that competition is a natural and fair way to allocate rewards in the real world. Only those individuals who are capable and hard-working can reach the top and deserve the rewards. Sports competition is the venue and process to identify the best and to produce and/or reproduce the elite in society. The above statements are based on the assumptions that rules and regulations are fair and the opportunities are open to all.

- Principles to develop rules and regulations in sports competitions:
 - i) Fair;
 - ii) Universal;
 - iii) Firm;
 - iv) Transparent;
 - v) Consistent;
 - vi) Specific;
 - vii) in line with the latest development of sports science and the technology;
 - viii) based on the nature of the sports and the needs of players and spectators.

General people view sports competitions as the venue and process to recognize their competence, advancement and achievement. Consequently, the following phenomena may happen:

- i) Demand for more elite training programmes and facilities are always connected with sports competitions.
- ii) Medal winning and supremacy of performance are common guiding principles.
- iii) Emphasize measurable outcomes to determine whether or not to participate
- iv) Fun element in sports is devalued and excellence is highly valued. Polarization of these two elements in sports emerges and becomes obvious.
- v) Sports become highly structured, controlled by adults and centrally governed.
- vi) More sports injuries are implied.

iv) Drugs in sport

- Reasons of athletes to use drugs:

Generally speaking, the mentality of winning at all cost, and the fame and financial rewards brought about by winning are the most common and obvious causes for athletes to use drugs.

However, sports sociologists find a more in-depth reason behind this phenomenon. They suggest that this can go beyond the winning pressure and the materialist rewards. Researches show that some of the drug users in sports are highly committed and hardworking. They just indiscriminately follow the norms of the sports culture to use performance-enhancing drugs. They attempt to create and maintain their sports identity with high recognition and respect among peer athletes and/or fans. This is particularly true for the modern high performance sports.

- The major reasons for banning the use of drugs in sports under Olympism are:
 - A true competition should be a comparison of the natural ability between athletes without involving any external assistance.
 - Fair play will no longer exist if sports become a competition of medical technology and pharmacology.
 - It is also a matter of ethics, the notion of "sports build character" will be ruined.
 - The health of athletes is another concern because the side effects of drugs in sports are not fully understood and monitored.
 - It may create an unfair competition because of the great differences between developing and developed countries in level of sports sciences and technology support, and the ability to cope with the financial burden behind.

Therefore, the IOC and the World Anti-doping Agency (WADA) have invested sizable resources and effort to tackle drug usage in sports since November 1999.

- Difficulties in implementing an anti-drug programme:
 - (1) There is a lack of comprehensive drug education programmes for all stakeholders including athletes, coaches, trainers, parents, sports administrators and business managers.
 - (2) There is also a lack of clear health-based guidelines and code of ethics for the reference of sports scientists, medical professionals, pharmacologists, coaches and trainers who help athletes to face drug issues.
 - (3) Penalty is not heavy enough to deter athletes from taking drugs illegally due to attractive rewards, peer-identity and over-conformity to the drug culture in sport.
 - (4) The influence of commerce sector on competitive sports is huge as great sports performance is often used in commercial advertising. This may also give rise to drug

abuse in sports.

(5) The illegal drug production industry is well developed.

- The influences on society if outstanding athletes are found using prohibited drugs:
 - (1) The “Great Sport Myth” that sports build good character will be ruined;
 - (2) Role model effects will be diminished;
 - (3) The traditional values of sports to society and the relevant beliefs will be questioned;
 - (4) Reinforce the wrong belief that it is alright to take drugs because a great athlete like Lance Armstrong also does so.

v) **Violence in sport**

- Violence in sport:
Sports violence exists throughout the human history. There are different types of sports violence:
 - (1) On the field;
 - (2) Off the field;
 - (3) Violence among players;
 - (4) Violence among spectators;
 - (5) Terrorism in sport, for example the incident of attacking athletes during the 1972 Munich Olympic Games.

Sports violence has two folds:

First fold: Dissatisfied with the performance or administration of a sports club.

Second fold: A reflection of social problems like unemployment, poverty, gap between rich and poor, racial discrimination, political and historical factors, etc.

- Attitudes of athletes, judges, spectators and the media towards violence in sport:
 - Athletes sometimes resort to violence to
 - (1) establish his/her status in the team;
 - (2) reaffirm his/her identity in the sports culture; or
 - (3) demonstrate his/her power to dominate or control opponents.
 - Referees and judges
Execute the established rules and regulations to strike a balance between athletes' acceptable violence and ensure the safety and flow of sports competitions.

-
- Spectators
 - (1) perceive sports violence as entertaining and exciting;
 - (2) expect sports violence in certain sports like ice-hockey, boxing and mix martial arts; and
 - (3) express and reflect their feelings through sports.

 - Media
 - (1) blame or glorify sports violence;
 - (2) focus and enlarge sports violence through replay or high definition slow motion; and
 - (3) treat it as part of their roles and functions to narrate violent incidents in sports.

 - Measures to reduce violence in sport:
 - (1) set or modify sports rules to protect athletes and spectators;
 - (2) impose heavy penalty on those athletes and spectators who use violence;
 - (3) reduce the attraction of sports violence to spectators so as to lower its commercial value;
 - (4) deny the saying that violence can improve sports performance;
 - (5) educate athletes and spectators about moral values to urge them to reject violence in sports;
 - (6) promote and pay more respect to those outstanding athletes who adhere to fair play; and
 - (7) tackle and solve the underlying social problems.

vi) Politics and sport

Meaning of “politics”: “Politics” refers to the process of using social power to make decisions that affect people’s lives.

- Relationship between sports and politics:
There is a long relationship between sports and politics in the Olympic history such as Olympic truce and Olympic boycott.
- Political functions of sport:
 - (1) increase nationalism;
 - (2) use sport for political propaganda;
 - (3) encourage national integration;
 - (4) sustain existing social conflicts;
 - (5) act as vehicles for socialization;
 - (6) act as political ambassadors of international goodwill;
 - (7) enhance the international status of the country or region.
- The political actions below may bring positive impact on sports development:
 - (1) Balance the interests of different stakeholders in the sports world;
 - (2) Have more transparent processes and reasonable outcomes in sports development;
 - (3) Involve more people from different stakeholders in the decision making process.

vii) Media and sports

- The guiding principles for the media in reporting sports events and their development:
 - (1) Precision, factual;
 - (2) Scientific and objective;
 - (3) Any approach with personal agenda or over-subjective reporting should be avoided.
- The role of media on sports development is supposed to:
 - (1) provide accurate and timely sports information to spectators;
 - (2) provide aesthetic experience in sports to spectators;
 - (3) provide vicarious excitement to spectators;
 - (4) reflect the cultural values of particular sports in different countries;
 - (5) create a mass sports culture;
 - (6) provide sponsorship through broadcasting rights; and
 - (7) promote sports.

The media has great impact on sports competitions due to the financial and/or exposure dependence of certain sports on it:

- The form of competitions, rules and regulations and competition schedules of individual sports like football, badminton, table tennis, diving, etc. have been changed to facilitate live broadcast (TV rating and commercial advertisement breaks). For example:
 - ✧ Sudden death for tie games in tennis and volleyball to control the competition time for commercial breaks and easier TV programming;
 - ✧ Encourage more record-breaking attempts and/or offensive play in competitive sports by changing the rules (e.g. football, basketball). As a result, sports competitions become more exciting and spectacular;
 - ✧ Change the scoring system from "Side-out Scoring System" (only the serving team can score points) to "Rally Point Scoring System" (both serving and receiving team can score points), e.g. volleyball, badminton;
 - ✧ Reschedule the competition date and/or time in Olympic Games to boost the TV rating in certain countries as required by sponsors, e.g. Beijing 2008 swimming finals;
 - ✧ Package and/or repackage sports competitions like X Games, Dragon boat competitions, etc. turning them into carnival-style sporting events.

Nowadays, the media has a more dominant influence on sports development because of the financial benefits and the exposure rate that it may bring. Their mutual impact is unbalanced.

viii) Sports and Gambling

According to Interpol figures, global sports betting amounts to \$1 trillion each year and 70% of which is from football. In USA, UK, and certain parts of Asia, betting in some popular sports is legal and is regulated by the government or governing bodies, for example NBA & NCAA basketball, American football, baseball, hockey and horse racing. Although some sports gambling is legal and helps to raise money for sports facilities, buildings and sports programmes, most sports gambling is illegal. Sports gambling becomes an international organised crime as it involves huge profits.

- The reasons made gambling popular in sports:
 - (1) Sports gambling is attractive to spectators, it can increase spectator involvement.
 - (2) People usually believe that they can make money in sports gambling.
 - (3) New media technology like the development of internet, betting charts, live satellite broadcast, the analysis of expert commentaries, etc. further facilitates the development of the sports gambling industry.
- The consequences of gambling in sports include:

-
- (1) Sports gambling undermines integrity in sport and the Olympic values.
 - (2) Match-fixing becomes popular in some sports like football, basketball, cricket and sumo.
 - (3) Match-fixing will lead to loss of spectators and the decline of the relevant sports because essential elements in sports such as fairness, unpredictability and excitement are gone.
 - (4) More and more outsiders approach athletes and referees to get insider information and to manipulate match results.
- In Hong Kong, The Home Affairs Bureau is responsible for formulating gambling policy and monitoring its implementation. The influences of legalising football betting on society are:
 - Positive effects:
 - (1) Football betting can help control the number of illegal bookies and raise money for Hong Kong social services;
 - (2) Provide an attractive activity for citizens and reduce organised crime;
 - (3) Open up a source of profits for the sports industry;
 - (4) Increase the TV ratings and promote the popularity of sports;
 - (5) Maximise sports excitement and provide decision making experiences.

 - Negative effect:
 - (1) Undermine integrity in sport on the whole;
 - (2) Increase the possibility of match-fixing;
 - (3) The control of the sports development may shift to those international enterprises which control sports gambling;
 - (4) Establish negative role models for young athletes;
 - (5) Damage sports development and Olympism.

E. Factors influencing participation in sport and recreation

The following are possible factors affecting personal participation in sport and recreation.

i) Personal factors:

- **Personality and interest** - Personality may affect one's initiative, choice of activities, dedication, etc. in sport and recreation.
- **Physique and physical fitness** – Some people consider themselves as “not the sporty type” and therefore are reluctant to participate in sport and recreation.
- **Previous physical experience** – Some people may have accumulated some uneasy experience in sport and recreation due to a lack of basic knowledge or skills.
- **Career** - Too lengthy working hours may prevent one from participating in sport and recreation.
- **Socio-economic status** – People with higher socio-economic status tend to participate more in sport and recreation.
- **Education level** – People with a higher education level tend to participate more in sport and recreation.

ii) Family factors:

- The socioeconomic status, family tradition, parental and sibling influence, etc. determine the interest, opportunities and patterns of participation in sport and recreation activities to a great extent.

Fig. 8.1 Family factors influence the interest, opportunities and patterns of participation in sport and recreation activities

iii) Social factors:

- **Expectations on gender** – With different social expectations, men and women make different choices when choosing physical activities, investing resources, setting goals, etc. For example, in Hong Kong, the participation patterns of men and women in football (being considered as more masculine) and dance (being considered more feminine) are very different.

- **Peers** – To meet friends or make friends is an important motive for participating in sport and recreation activities.
- **Social climate** – One tends to participate more in sport and recreation when TV, newspapers, magazines and people around are talking about health and physical fitness, or when he sees related promotional slogans.

Fig 8.2 Gender influences the choices of physical activities

iv) Cultural factors:

- **Mass media** – TV, radios, newspapers and magazines, internet, etc. all play an important role in promoting sport and recreation activities. Through them, information of sport and recreation activities can permeate through all sectors of society. It can also create a mass campaign for sports and recreation through the effects of celebrity promotion.
- **Races, religions, cultural traditions, social systems** – People have different values because of differences in races, religions, cultural traditions, social systems, etc. They will also have different attitudes and show support for various sports and recreation activities accordingly.

v) Political factors:

- Depending on its ideologies, policies, political considerations, etc., the government determines the way how sport and recreation are promoted in society, including financial support and the mode of development; and these factors directly affect the participation of sport and recreation among citizens.

vi) Environmental factors:

- **Location, facilities and weather** – Factors such as location, accessibility to amenities, quantity and quality of the facilities and equipment, weather, etc. play a part in determining the level of participation in sport and recreation activities.
- The mode and frequency of participation in sport and recreation are also affected by the economic situation of society.

Examples of Enquiry Activities

Theme		Activities
1	Major international competitions	<p>Issues for project learning (<i>See additional information (1) to (4)</i>):</p> <ul style="list-style-type: none"> ● Political influence on the modern Olympic Games ● Major international sports events ● Modern China's sports culture ● Modern sports world ● China and the Olympic Movement
2	Olympism	<p>Reflection:</p> <ul style="list-style-type: none"> ● Based on one's own experiences on sports participation, identify five to eight life events that embody the ideals of Olympism. <p>Slogan design:</p> <ul style="list-style-type: none"> ● Design slogans to promote Olympism
3	Factors influencing participation in sport and recreation	<p>Information collection:</p> <ul style="list-style-type: none"> ● Browse through the website of World Health Organization (WHO) and acquaint oneself with the following information: <ul style="list-style-type: none"> - the definition and benefits of physical activity - the definition and examples of moderate-intensity physical activity - the definition and examples of vigorous-intensity physical activity - the problem of inadequate amount of physical activity among the general population and the WHO recommendations in this regard ● Conduct a survey (with a chosen or specifically designed questionnaire) to understand <ul style="list-style-type: none"> - the amount of daily physical activity (excluding PE class) among students of different grades in their schools - the factors influencing the participation in sports and recreation activities (For example, sex, interest, physique and physical fitness, environment, family, mass media, etc.) among the students ● Make sure that the questionnaire will provide adequate data for the following enquiry activities.

Examples of Enquiry Activities

Theme		Activities
		<p>Enquiry activities:</p> <ul style="list-style-type: none"> ● Group the students according to their accumulated amount of physical activity (excluding PE lessons) <ul style="list-style-type: none"> - Group 1: accumulate less than 30 minutes of physical activity at moderate / vigorous intensity per week - Group 2: accumulate more than 30 minutes but less than 90 minutes of physical activity at moderate / vigorous intensity per week - Group 3: accumulate more than 90 minutes or more of physical activity at moderate / vigorous intensity per week ● Compare the three groups and determine if there are different factors influencing their accumulated amount of physical activity (excluding PE lessons). ● Discuss how to help students tackle the difficulties of participation in sports and recreation activities; and make specific recommendations. ● Announce the survey findings and recommendations.
4	China's sports culture	<p>Information collection:</p> <ul style="list-style-type: none"> ● Browse through the website of Chinese Olympic Committee (http://en.olympic.cn/) and study the following two documents: <ul style="list-style-type: none"> - “An Outline of the National Fitness Programme of China” (in Chinese only) - Sports Law of the People's Republic of China (in Chinese only) ● Identify cases of Hong Kong and Mainland China to show <ul style="list-style-type: none"> - the development of elite athletes - the development of sport for all - the development of sport-related careers <p>Enquiry activities:</p> <ul style="list-style-type: none"> ● Compare the characteristics of the sports culture of Hong Kong with those of Mainland China

Examples of enquiry activities (Additional information) (1):**Political influence on the modern Olympic Games**

Objective: To understand the relationship between the Olympic Games and political events.

Description: Students choose from a list of events in Olympic history given by the teacher and submit a written report on

- the causes of the event
- the implications of the event on the Games and the subsequent Games

Examples of topics:

- The 1936 Berlin Games used for Nazi propaganda
- The withdrawal of China from the 1956 Melbourne Olympics
- The terrorist attack by the Black September group at the 1972 Munich Olympics
- The boycotts in the 1980 and 1984's Olympics
- South Africa's return to the Games in 1992

Examples of enquiry activities (Additional information) (2):**Major international sports events**

Objective: To deepen students' understanding of international sports competitions.

Description: Students investigate one of the international sports events with the following headings:

- To what extent does the event draw attention from the public? Why?
- Which organisation runs the event? What is the scale of the event? What human, financial and time resources are involved?
- How is the event organised? What role does the government play?
- What kinds of marketing strategies are adopted?
- How can the gains and losses of the event be evaluated? What are the comments from various sectors?

Examples of topics:

- The FIFA World Cup
- The World Artistic Gymnastics Championships
- Wimbledon (tennis)
- IAAF World Athletics Final

Examples of enquiry activities (Additional information) (3):**Modern China's sports culture**

Objective: To understand the sports development of modern China.

Description: The teacher gives the class a lecture on China's sports history and culture since the People's Republic of China was founded in 1949.

Implementation:

- Effectively using multi-media, the teacher traces the progress of the PRC as a sports nation from its inception right up to the present day. Particular emphasis will be on:
 - the nation's sports policy and systems
 - the stories of the national athletes
 - how the sports of China are linked to the world
 - how the economic and sports development relate to each other
- Students are encouraged to raise questions

Examples of enquiry activities (Additional information) (4):**Modern sports world**

Objective: To broaden the scope of students and to help them understand physical activities from different perspectives.

Description: In groups of three to five, students will be assigned one of the issues listed below. Students should present the information collected. Students should focus on the importance of the issue and its impacts on the development of sports world.

Exemplary issues:

- Globalisation
- Commercialisation
- Professionalisation
- Mass media
- Gambling
- Sport and the law

Examples of enquiry activities (Additional information) (5):**China and the Olympic Movement**

Objective: To further understand China's involvement in the Olympic Movement.

Description: During a class discussion, students should focus on the non-appearance of China at a number of Games in the past, her emergence as a highly competitive sports nation and her ability and readiness to host the Olympic Games.

Implementation:

- After conducting a lecture on the topic, the teacher leads a class discussion
- Asks open-ended questions with a view to encouraging students to put forward their points of view
- Encourages students to read relevant materials in their own time
