

*\*Teacher's version P.60- 83 (2.3: The Gini Coefficient - Activity 3)*

### Assessment 1

Fill in the missing information by referring to the diagram below.

- a. Usually the Gini Coefficient of a country lies between \_\_\_\_\_ and \_\_\_\_\_.
- b. When the Gini Coefficient is close to \_\_\_\_\_, the income distribution is more \_\_\_\_\_ because most income is earned by the richest households, whereas the lowest-income group earns much less.
- c. When the Gini Coefficient is close to \_\_\_\_\_, the income distribution is more \_\_\_\_\_ because the highest-income group does not earn much more than the lowest-income group.

Unit 2 Measuring Income Inequality

- d. When Area A expands, the Gini Coefficient will be \_\_\_\_\_, and the income distribution will be more \_\_\_\_\_. When Area A diminishes, the Gini Coefficient will be \_\_\_\_\_; and the income distribution will \_\_\_\_\_.
